

Design Spec

1. Summary:

- a. I plan to update the website with an interesting color scheme, a navigation bar, links to other relevant information, and a mailing list. I want the website to look eclectic.
- b. Choosing a better color scheme can make the website appear more eclectic. The current color scheme of the website, with the black background and dark blue texts do not make the website accessible or appear cohesive aesthetically. Having the website be more responsive will also make it appear more modern.
- c. I believe this is the best approach because an interesting color scheme can peak the interest of visitors to the website, and make it stand out from others.
